ARIN JOSHI

Software Engineer · Full-Stack Developer (React.js / Node.js) · Frontend Engineer

Ahmedabad, Gujarat, India | +91 82902 79001 | thakararinjoshi@gmail.com

arinjoshi.vercel.app | linkedin.com/in/arinjoshi | github.com/Arin-joshi

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with **3 years** of professional experience building and shipping production web applications on the **React.js, TypeScript, Node.js, and PHP/Laravel** stacks, plus two self-built live products serving real users. Strong grounding in Data Structures & Algorithms, OOP, SOLID principles, and system design, applied to real-time WebSocket platforms, geospatial search, multi-provider API integrations, and legacy-to-modern migrations. Experienced in owning features end to end in Agile teams, from design and code review through deployment and monitoring, with a consistent record of improving performance, reliability, and delivery speed on systems serving live users.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, PHP, Java, Python, SQL, HTML5, CSS3
Frontend	React.js, Next.js, Redux Toolkit, Context API, React Hooks, Tailwind CSS, Material UI, SASS, Responsive & Mobile-First Design
Backend & APIs	Node.js, Express.js, Laravel (PHP), Handlebars (HBS), REST APIs, GraphQL, WebSockets, JWT, OAuth 2.0, Microservices
Databases	MongoDB, MySQL, PostgreSQL / PostGIS, Firebase, Supabase, Redis
Cloud & DevOps	AWS (EC2, S3), Docker, CI/CD Pipelines, Git, GitHub, Vite, Webpack, Jira, Postman, Vercel
CS Fundamentals	DSA, System Design, OOP, SOLID Principles, Design Patterns, Unit Testing, Agile/Scrum, Performance Optimization

PROFESSIONAL EXPERIENCE

Software Engineer, Aipxperts Technolabs *Feb 2026 - Present*

Ahmedabad, Gujarat · PHP, Laravel, React.js, Node.js, Handlebars, MySQL

- Build and scale core features for **Legiit**, a U.S.-based freelance and services marketplace, shipping production functionality across a PHP/Laravel and React.js stack serving live paying customers.
- Develop full-stack features for **Education Walkthrough**, an education platform on **Handlebars (HBS) and Node.js**, spanning server-rendered views, Node.js APIs, and business logic end to end.
- Lead migration of 10+ legacy PHP pages to **React.js**, rebuilding responsive interfaces that improved UI consistency and lifted user engagement on migrated flows.
- Optimize MySQL queries and refactor legacy modules following clean-architecture and SOLID principles, cutting page load times and reducing technical debt across the codebase.
- Partner with product and design in Agile sprints to turn requirements into technical specs, delivering high-priority features on schedule while maintaining quality through code reviews.

Frontend Developer, NKB PlayTech Pvt. Ltd. *Sep 2023 - Jan 2026*

Jaipur, Rajasthan · React.js, TypeScript, Node.js, MongoDB, Firebase, Supabase, WebSockets · Full-time

- Built and maintained a production gaming platform of **8+ interactive real-time games** (including Coin Flip, Triple Game, and More or Less) using React.js, TypeScript, and Node.js, serving thousands of daily active users with WebSocket-based live state.
- Sustained low-latency live gameplay for **1,000+ concurrent players per game room** by designing event-driven WebSocket state and tuning server broadcast logic to keep round updates under 150 ms p95.
- Optimized frontend rendering with **React.memo, useCallback, and code splitting**, cutting unnecessary re-renders by ~40% and keeping real-time interactions smooth under load.
- Drove sprint planning, backlog grooming, and cross-team collaboration through Jira in an Agile/Scrum workflow, accelerating feature delivery and debugging cycles.
- Partnered with backend and QA engineers to triage and resolve **15+ production bugs**, improving system stability and reducing player-reported issues.

React.js Developer Intern, Celebal Technologies *May 2023 - Jul 2023*

Jaipur, Rajasthan · React.js, JavaScript, CSS3

- Developed **10+ reusable React.js components** using React Hooks (useState, useEffect, useCallback) for scalable web apps, following clean-code, DRY, and SOLID principles.
- Implemented fully responsive layouts with CSS Grid, Flexbox, and media queries for pixel-perfect, cross-browser designs; contributed to code reviews and Agile sprint ceremonies.

FLAGSHIP PRODUCTS (SELF-BUILT, LIVE)

Paassly: Hyperlocal Discovery Platform for India's Street Vendors · paassly.vercel.app

Next.js, TypeScript, Supabase / PostgreSQL + PostGIS, MapLibre, OpenStreetMap, OSRM, Redis, Razorpay

- Built a hyperlocal marketplace where street vendors go live on a map and nearby buyers discover who is open in real time, then get one-tap walking directions, built for stalls and micro-shops with no website or fixed storefront.
- Shipped geospatial discovery on **Postgres/PostGIS** with a clamped search radius, result cap, geohash caching, and Redis rate limits, keeping map polling cheap across multiple server instances.
- Designed nearby ranking as a strict, explainable cascade (active Boost, then distance, then rating, then followers), keeping the SQL query and app-side sort identical and test-covered so results cannot drift after optimizations.
- Integrated **MapLibre + OpenStreetMap** for the live map and **OSRM** for turn-by-turn routing, avoiding paid map-API costs on a high-refresh map.
- Implemented a vendor Premium product end to end: **Razorpay checkout, signed webhooks, entitlement ledger, PDF invoices, timed map Boost, verified badge**, and downloadable shop insights.
- Added multilingual support (Hindi, English, Gujarati, Tamil, Malayalam, Marathi, Bengali, and more) and an admin moderation console with a privacy flow aligned to India's DPDP Act, 2023.

Gyani Astro: Vedic Astrology & Numerology Platform · gyaniastro.arinstechnology.in

Next.js 15, React 19, Tailwind CSS, Supabase (Auth + Postgres), Razorpay, Gemini / Groq / OpenRouter, Vercel

- Built a bilingual (English/Hindi) full-stack product for daily rashifal, Panchang, Janam Kundali, Kundali Milan, shubh muhurat, and 11 numerology tools, live under Arin's Technology.
- Engineered the Vedic chart engine with **astronomy-engine**: Lahiri ayanamsa, sidereal planet positions, nakshatra, Lagna, whole-sign houses, retrograde flags, and Vimshottari Mahadasha, all computed in code, with AI only interpreting the structured output.
- Implemented **36-point Ashtakoota (Guna Milan)** matching from both partners' computed charts, feeding the structured result into AI so readings stay tied to the calculation.
- Designed a **multi-provider AI layer (Gemini, Groq, then OpenRouter)** with ordered fallback, server-side prompts, and per-plan weekly usage quotas plus a free trial, keeping readings available when a provider fails.
- Integrated **Razorpay** with server-side order creation, HMAC signature verification, webhooks, and receipts, plus paid 1:1 astrologer call booking with a timed meeting-join window.
- Shipped an admin console (users, bans, payments, plans, AI prompt editing, call requests), scheduled jobs for account purge and SLA, programmatic SEO with JSON-LD, and branded Kundali PDF export.

PROBLEM SOLVING & SYSTEM DESIGN

- Solved **300+ Data Structures & Algorithms problems** across LeetCode, GeeksforGeeks, and HackerRank, covering Arrays, Strings, Linked Lists, Trees, Graphs, Recursion, Dynamic Programming, Sorting, and Searching.
- Applied core system-design concepts (scalability and load balancing, caching and CDN strategy, geospatial indexing, database design and sharding, and microservices and API design) while building the real-time NKB gaming platform and the PostGIS-backed Paassly discovery engine.

EDUCATION

B.Tech, Computer Science Engineering · Global Institute of Technology, Jaipur *Jun 2020 - Jun 2024*

CGPA: 7.53 / 10 · Relevant Coursework: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, System Design

ADDITIONAL

- **Ways of Working:** Agile/Scrum, peer code review, unit testing, performance profiling, and end-to-end feature ownership from design through deployment and monitoring.
- **AI-Assisted Development:** Use modern AI developer tooling to accelerate prototyping and debugging while retaining full ownership of architecture and design decisions.
