

ARIN JOSHI

Software Engineer | Frontend & Full-Stack (MERN) | React.js · TypeScript · Node.js

+91 8290279001 • thakararinjoshi@gmail.com • arinjoshi.netlify.app • Ahmedabad, Gujarat, India

PROFESSIONAL SUMMARY

Results-driven Software Engineer with 3+ years of experience building scalable, production-grade web applications using React.js, TypeScript, JavaScript, and the MERN stack (MongoDB, Express.js, React.js, Node.js). Specialized in real-time systems, WebSocket-driven multiplayer interfaces, component architecture, and high-performance frontend development. Demonstrated ability to reduce UI render latency, optimize page load times, and deliver cross-browser, WCAG-accessible UIs in Agile/Scrum environments. Strong foundation in Data Structures & Algorithms, System Design, RESTful API integration, and CI/CD pipelines. Seeking SDE-1 / Frontend Engineer / Full-Stack Developer roles at high-growth MNCs and top-tier startups.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Java, Python, SQL, HTML5, CSS3
Frontend: React.js, Next.js, Redux Toolkit, Context API, React Hooks, Tailwind CSS, Material UI, SASS, Webpack, Vite
Backend & APIs: Node.js, Express.js, REST APIs, WebSockets, GraphQL, JWT Authentication, OAuth 2.0, JDBC
Databases: MongoDB, MySQL, PostgreSQL, Firebase
DevOps & Tools: Git, GitHub, Docker, CI/CD Pipelines, AWS (EC2, S3), Postman, Jira, Agile/Scrum
Core CS: Data Structures & Algorithms (DSA), System Design, OOP, Design Patterns, SOLID Principles, Code Review

PROFESSIONAL EXPERIENCE

Junior Software Engineer | NKB PlayTech Pvt. Ltd — Jaipur

Mar 2025 – Apr 2026

- Engineered real-time multiplayer game interfaces using React.js, TypeScript, and JavaScript (ES6+), reducing UI render latency by ~30% through optimized component architecture and memoization strategies.
- Implemented WebSocket-based state synchronization enabling sub-100ms live gameplay updates across concurrent users, scaling multiplayer sessions reliably at production load.
- Built reusable, modular React component libraries aligned with DRY and SOLID principles, improving team development velocity by 40% across multiple product lines.
- Collaborated cross-functionally with backend engineers to define REST API contracts and integrate real-time event-driven data pipelines into interactive game UIs.
- Participated in Agile/Scrum sprints — contributed to sprint planning, code reviews, and CI/CD deployment workflows using Git and GitHub Actions.

MERN Stack Developer | Kotibox Global Technologies — Jaipur

Sept 2023 – Feb 2025

- Architected and deployed the company's first production website using the full MERN stack (MongoDB, Express.js, React.js, Node.js), delivering on schedule with zero post-launch critical bugs.
- Built fully responsive, cross-browser-compatible UIs using Tailwind CSS and HTML5, achieving WCAG accessibility compliance across all major browsers and devices.
- Integrated third-party REST APIs and implemented JWT-based authentication with OAuth 2.0, strengthening application security and session management.
- Reduced page load time by 25% through code splitting, lazy loading, and bundle optimization using Webpack and Vite, improving Core Web Vitals scores.
- Implemented PostgreSQL and MongoDB schema designs, optimized query performance, and maintained data integrity across multi-service environments.

React.js Developer Intern | Celebal Technologies — Jaipur

May 2023 – Jul 2023

- Developed 10+ reusable, scalable React components following clean code principles; contributed to a shared component library adopted across the engineering team.
- Implemented responsive UI layouts using CSS Grid, Flexbox, and media queries, achieving pixel-perfect designs and cross-device compatibility across all screen sizes.
- Gained hands-on exposure to Agile development cycles, Git-based version control workflows, and collaborative code review processes.

KEY PROJECTS

Coin Flip Multiplayer Game — *React.js · TypeScript · WebSockets · Redux Toolkit · REST APIs*

- Architected a real-time multiplayer coin flip game with live state synchronization using WebSockets, supporting concurrent users with sub-50ms latency at production scale.
- Developed two game modes (multiplayer & instant play) with optimized event-driven state management via Redux Toolkit, ensuring smooth and consistent UX.
- Implemented tamper-resistant server-sent game outcome validation logic, ensuring fair gameplay integrity and preventing client-side manipulation.

More or Less — Number Prediction Game — *React.js · JavaScript · Context API · REST APIs*

- Built an adaptive number prediction game with real-time feedback, dynamic difficulty scaling, and smooth 60fps UI interactions; used Context API for global state management.
- Implemented comprehensive input validation, edge case handling, and responsive design — resulting in a robust, production-ready UX across all viewports.

Triple Game — Tile Matching Puzzle — *React.js · TypeScript · CSS3*

- Engineered a performant tile-matching puzzle game using React.memo and useCallback, cutting unnecessary re-renders by 35% and maintaining consistent frame rates.
- Built a modular, reusable component system with mobile-first responsive layouts supporting all screen sizes and devices.

Legiit — Service & Course Marketplace Platform — *React.js · JavaScript · Cursor AI*

- Resolved 20+ critical layout and performance bugs in a production dashboard, improving page responsiveness and measurably increasing user engagement metrics.
- Refactored legacy codebase using clean architecture patterns and SOLID principles, reducing technical debt and improving long-term code maintainability.

EDUCATION

Bachelor of Technology (B.Tech) — Computer Science & Engineering

Jun 2020 – Jun 2024

Global Institute of Technology, Jaipur | CGPA: 7.53/10

Relevant Coursework: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), DBMS, Operating Systems, Computer Networks, Software Engineering

ACHIEVEMENTS & HIGHLIGHTS

- Reduced UI render latency by ~30% at NKB PlayTech through React architecture optimization — measurable production impact.
- Achieved 25% page load time reduction at Kotibox via code splitting, lazy loading, and Vite/Webpack bundle optimization.
- Delivered multiplayer WebSocket system with <50ms latency and <100ms state sync, supporting concurrent users at scale.
- Increased development velocity by 40% by building and standardizing a shared reusable React component library.
